

U.S. Patent Application Serial No. 10/768,180
Amendment filed April 16, 2008
Reply to OA dated November 16, 2007

AMENDMENTS TO THE CLAIMS:

Please amend claims 12 and 19, as follows. This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Previously presented): An electronic device which comprises a functional element in the form of an electric conductive wire, and consisting of a high molecular weight material which has a steric structure containing one or more three-dimensionally disposed modifying functional groups, said structure being known or predictable, in which

said high molecular weight material is a biopolymer consisting of DNA or a hybrid thereof with RNA, and

said modifying functional groups are selected from the group consisting of positive hole-transporting functional groups, electron-transporting functional groups and a combination thereof, and in which

said high molecular weight material is used as a foothold for three-dimensionally disposing as side chains the modifying functional groups, and donation and acceptance of electrons are essentially conducting between the three-dimensionally disposed modifying functional groups.

Claim 2 (Canceled).

Reply to OA dated November 16, 2007

Claim 3 (Withdrawn): An electronic device as defined in claim 1, in which said synthetic polymer is peptide DNA, guanidine DNA or a composite thereof.

Claim 4 (Previously presented): An electronic device as defined in claim 1, in which said positive hole-transporting functional group is 1,1-bis[4-[N,N'-di(p-tolyl)amino]phenyl] cyclohexane, N,N'-diphenyl-N,N'-di(m-tolyl)benzidine, phenothiazine, tetrathiafulvalene or fullerene.

Claim 5 (Previously presented): An electronic device as defined in claim 1, in which said electron-transporting functional group is 2,5-bis(1-naphtyl)-1,3,4-oxadiazole, 2-(4-tert-butylphenyl)-5-(4-biphenyl)-1,3,4-oxadiazole, anthraquinone, tetracyanoquinodimethane or porphyrine.

Claim 6 (Canceled).

Claim 7 (Previously presented): An electronic device as defined in claim 1, in which said functional element is a circuit consisting of an electrically conductive wire.

Claim 8 (Withdrawn): An electronic device as defined in claim 1, in which said functional element is a resistor consisting of an electrically conductive wire.

Claim 9 (Withdrawn): An electronic device as defined in claim 1, in which said functional element is a diode consisting of two or more electrically conductive wires.

U.S. Patent Application Serial No. **10/768,180**
Amendment filed April 16, 2008
Reply to OA dated November 16, 2007

Claim 10 (Withdrawn): An electronic device as defined in claim 1, in which said functional element is a capacitor consisting of two or more electrically conductive wires.

Claim 11 (Previously presented): An electronic device as defined in claim 1, in which said functional element is a transistor consisting of two or more electrically conductive wires.

Claim 12 (Currently amended): An electronic device as defined in any one of claims 1, 3, 4 and to 5, in which said functional element is an electrically conductive wire wherein said positive hole-transporting functional groups and/or said electron-transporting functional groups are periodically contained in said biopolymer ~~and/or said synthetic polymer~~.

Claim 13 (Original): An electronic device as defined in claim 12, in which said electrically conductive wire is incorporated therein as a circuit of the device.

Claim 14 (Withdrawn): An electronic device as defined in claim 12, in which said electrically conductive wire is incorporated therein as a resistor, and the resistor has a specific resistance capable of being controlled by varying a density of said modifying functional groups.

Reply to OA dated November 16, 2007

Claim 15 (Withdrawn): An electronic device as defined in claim 12, in which said electrically conductive wire is incorporated therein as a diode, and the diode is in the form of a block polymer wherein two or more of said electrically conductive wires are connected in series.

Claim 16 (Withdrawn): An electronic device as defined in claim 15, in which said diode is a photodiode, and said photodiode has introduced in a conjunction portion thereof a functional group capable of controlling a discharge or introduction of electrons by its optical response.

Claim 17 (Withdrawn): An electronic device as defined in claim 15, in which said diode is a light-emitting diode, and said light-emitting diode has introduced in a conjunction portion thereof a functional group capable of generating light emission by its electromotive force.

Claim 18 (Withdrawn): An electronic device as defined in claim 12, in which said electrically conductive wire is incorporated therein as a capacitor, and the capacitor is in the form of a block polymer wherein at least a part of the segments of said electrically conductive wire has an introduced insulating arrangement and said block polymer has a condition capable of being easily electrically charged in a neighborhood of the insulating arrangement.

Claim 19 (Currently amended): An electronic device as defined in claim 12, in which said electrically conductive wire is incorporated therein as a bipolar transistor, and the bipolar transistor is in the form of a block polymer wherein three of said electrically conductive wires are alternately

connected in series to form a PNP or NPN junction and said block polymer has said biopolymer and/or said synthetic polymer branched from a central segment thereof.

Claim 20 (Previously presented): An electronic device as defined in claim 11, in which said transistor is a field effect transistor wherein an electrical output of the field effect transistor is controlled by applying a predetermined level of the electric field to said device from an outside of said device.
